Step 1 - Depending on the geographical location, fence height, and fencing materials used, post hole size may vary. In general for residential chain link fences, dig holes 6" in diameter by 30" deep (or below frost line in your area). Another rule of thumb is to dig the holes three times the diameter of the post, i.e. a 2" diameter post would require a 6" diameter hole, and put one third of ...

The post bracket position also sets the clearance between the opener and gate in the open and closed positions. The curved design of the post bracket works well for installations on round and square fence posts. Because the post bracket carries the entire thrust of the active opener, bolts that completely penetrate the fence post must be used.

Self vs. manual catch. The self-catch or automatic head gate relies on the animal pushing the head gate with its shoulders with enough force to trip the spring-controlled catch mechanism. Herein lies the challenge: If you are working cattle of different sizes the head gate must be adjusted so that the opening is not too wide or too narrow.
