Brain Spine Tumors Children

In children, metastatic brain tumors are much less common than primary brain tumors. Childhood leukemias can sometimes spread to the CSF around the brain and spinal cord. When this happens, the cancer is still considered a leukemia (the cancer cells in the CSF are leukemia cells), so doctors use treatments directed at the leukemia.

Types of Brain and Spinal Cord Tumors in Children

Spinal cord tumors are benign or malignant growths in or near the spinal cord. They are less common in children than brain tumors and occur primarily in children 10 to 16 years old. Spinal cord tumors may arise from the spinal cord region (primary) or spread to the cord from other organs (metastatic). Metastatic spinal cord tumors, which are cancerous, are more common in children than primary spinal cord tumors.

Spinal Cord Tumors in Children | Johns Hopkins Pediatric ...

A childhood brain or spinal cord tumor is a disease in which abnormal cells form in the tissues of the brain or spinal cord. The brain controls many important body functions. The spinal cord connects the brain with nerves in most parts of the body. Brain and spinal cord tumors are a common type of childhood cancer.
