It's also one of the reasons why Cambridge Audio claims that the Azur 650R sounds like separates rather than an AVR—and why it also claims that it can handle virtually any impedance load. A cool biamping mode lets you use the built-in surround back right and surround back left amplifiers in conjunction with the front left and right ...

I have a Cambridge Audio 650R receiver, which I believe was updated with the firmware (v1.9) to allow 3D passthrough (I have regularly watched 3D films through it so I know it was done). Does this make it HDMI 1.4 compliant (if capable of Blu Ray 3D at all, I understood it had to be) as opposed to the 1.3C it was out of the box?
