food commodities and fuels a \$362 billion global industry. Millions of people in largely developing, coastal communities depend on the fishing industry for their livelihood and half the world's population relies on fish as a major source of protein. When fish disappear, so do jobs and coastal economies.

The alleged crisis in world fisheries is not reflected in production statistics. The total production of fish has increased continuously from 20 million tonnes in 1950 to 180 in 2012, while the catches in capture fisheries have stagnated at 90 million tonnes. Nevertheless, there have been some spectacular fisheries collapses. With a growing world
