one touch.

## **74hc595 Rgb Led Matrix Schematic**

The 74HC595 will be driving the LEDs in the sparkfun board. However, this chip only outputs 0 or 5V and it can output as much as 70mA per pin. This means we must use current limiting resistors to prevent damaging the LEDs. Find the

So lets read our schematic, with our LED Matrix we have 8 rows (ROW1, etc) and 8 columns (RED1, etc), row 0 and column 0 for us will start at the top left. The first shift register controls the rows and the second shift register controls the darlington array which in turn controls the columns.

The longer positive LED leads must all be towards the chip, whichever side of the breadboard they are on. It now just remains to attach the jumper leads as shown above. Do not forget the one that goes from pin 8 of the IC to the GND column of the breadboard. Load up the sketch listed a bit later and try it out.
